

Health-check Full

Ardoq Services Offering

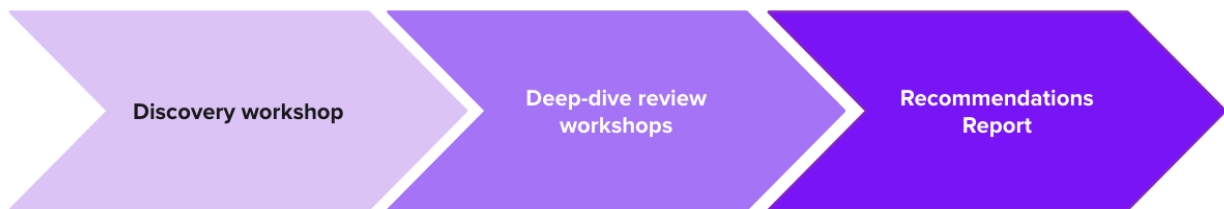

A deep-dive review of your Ardoq platform status by one of our Professional Services experts with a detailed report of recommendations to follow.

What it is

The Health-check Full module is a deep-dive assessment of every aspect of your current Ardoq platform status. A comprehensive report of any recommendations arising from this assessment will give you the confidence that your Ardoq platform is aligned to both your business needs and our current recommended practices. A Professional Services Consultant will firstly meet with your nominated stakeholders to gather the necessary information to ensure an understanding of the context of your current Ardoq platform usage and configuration. Then, the consultant will conduct a series of workshops to complete a detailed review of your current metamodel, folder and workspace structure, data quality, viewpoints, reports and governance processes. At the conclusion, a detailed report is delivered with clear recommendations arising from the review as to any changes or improvements that should be made.

The Health-check Full module consists of the following:

What you'll accomplish

- Realign your Ardoq platform to your business needs
- Realize efficiencies through adoption of recommended practices

What you'll get

- Discovery workshop
- Metamodel, folders and workspaces review workshop
- Viewpoints review workshop
- Data quality review workshop
- Reports review workshop
- Governance review workshop

- Enhance user experience and accessibility

- Recommendations Report
