

# Health-check Lite

## Ardoq Services Offering

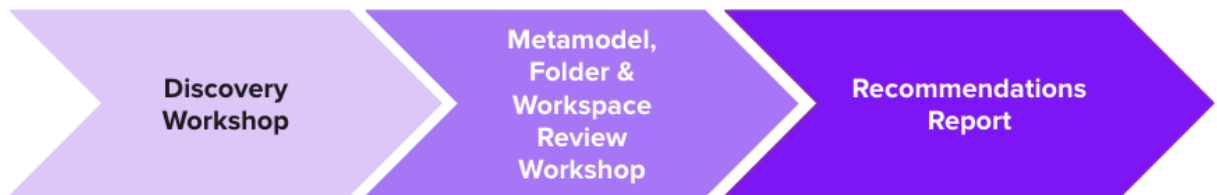

A high-level review of your Ardoq platform status by one of our Professional Services experts with a summary report of recommendations to follow.

### What it is

The Health-check Lite module will give you the confidence that your Ardoq platform status is aligned to both your business needs and current recommended practices. A Professional Services Consultant will meet with your nominated stakeholders to gather the necessary information to ensure an understanding of the context of your current Ardoq platform usage and configuration. Then, the consultant will conduct a high-level review of your current metamodel, folder and workspace structure against that context and our current recommended practices. At the conclusion, a summary report is delivered with clear recommendations arising from the review as to any changes or improvements that should be made.

The Health-check Lite module consists of the following:

---

### What you'll accomplish

- Realign your Ardoq platform to your business needs
- Realize efficiencies through adoption of recommended practices
- Enhance user experience and accessibility

### What you'll get

- Discovery workshop
  - Review workshop
  - Recommendations Report
-
